

Master Development Document – Feature Scope & Requirements

I. Admin Panel

1. Admin Features

- Implement commission modification functionality
- Create and manage a promotion system (creation/editing capability)
- Draft and integrate Terms & Conditions for:
 - Users
 - Sellers
 - Delivery personnel

2. Wallets & Payments

- Implement withdrawal of payments (test mode)
 - Manage seller and delivery wallets
-

II. User Features

1. Electronic Loyalty Card

- Create a loyalty card system to track purchases
- Implement a reward roulette feature after X purchases

2. Interface Fixes

- Fix the notification bell on the user side
- Add a "Back" button after login

3. Security Enhancements

- Add password restrictions: at least 8 characters, 1 uppercase letter, and 1 number
- Translate entire application into French with option to switch to English

4. Geolocation Support

- Integrate geolocation on the client-side application
-

III. Seller Management

1. Unregistered Accounts (No SIRET)

- Limit listings to 2 products
- Add account expiration (duration TBD)
- Add SIRET field in settings to allow upgrade to full account

2. SIRET/SIREN Verification

- Validate input format (SIRET – 14 digits, SIREN – 9 digits)
 - Block accounts after entry until manual/admin verification
 - Implement manual/admin approval process
 - 3. **Company Profile Updates**
 - Remove "Budget" field from profile
 - Replace "Description" field with a textarea (with character limit and formatting options)
 - 4. **Sales Module for Services**
 - Add service-based seller support to enable hybrid marketplace (product + service)
-

IV. Content & Pages

1. **Proposals Section**
 - Draft content for the "debwouya" section
 2. **Help Section**
 - Create user support content for existing app functionalities
 3. **Membership Page**
 - Maintain simplified version for early adopter display (user card format)
-

V. Deployment & Technical Notes

- Deploy full application (production mode)
 - Ensure currency symbol and logic is set to Euro (€)
 - Create the website version of the app (if feasible)
 - Validate geolocation integration
 - Provide multi-language support (FR/EN)
 - Add verification process post-registration on the delivery side
 - Setup environment for secure deployment with scalable backend architecture
-

VI. Design Reference

- Figma Design File:
