pass: 123456

** Dashboard Section **

- the inventory module is still not correct - this should not be there “N15” - it should be a value actually related to the inventory count.
-

** Customers Section **

- **Add A New Customer**
 - the button should only say “Add New Customer”
 - there should not be a popup for adding a new customer - make it a page like the Add New Inventory module - a page, not a popup - this should be true for ALL modules - action buttons should be consistent and all work in the same way throughout the User Interface (UI).
- **Customers Summary**
 - “In-Active” should just say “Inactive” - make this change on all modules that use it please.
 -
- **Customer List**
 - should not have the following columns in the table
 - Customer Since format should only be the year -> “2025” NO TIMESTAMP.
- **Edit Customer Module**
 - should have all U.S. states in a dropdown not a text field.
 - Do not use the word “Customer” everywhere - too redundant
 - Customer name should be: Name
 - Customer email should be: Email
 - Customer category should be: Category
 - The Phone Number field is missing the label “Phone Number”
- **The Edit Customer Module should have the following layout order:**

Customer #	Name
Email	Phone Number
Category	Address (title) • Street (field) • City (Field) • State (Drop down list of 50 states) • Zip (field)

**** Orders Section ****

- **Create New Order**
 - the items drop down menu is a populated list - some of the items in the invent list are displayed, however, there are some inventory items that were deleted that are still showing up in the list.
 - the Orders blue highlight in the left column should be active whenever a user is in an order subpage (edit, add new etc.) - and any module the user is in the left column blue highlight should work the same - highlighted blue to indicate what section they are in even when in sub pages (edit pages etc.)

**** Estimating Section ****

- The Inventory Summary background color should not be blue - all Summary background colors should match the Customers Summary module (white background).
- The page title should be "Estimates", not "Estimation"
- The list title should be "Estimates List", not "Estimation List"
- The "Add New Estimation Button" should be "Add New Estimate"
- when adding a new estimate it should not be a popup - it should be a page - the same page as when you edit an estimate.
- the new estimate page should have a customer section at the top - we should be able to pull the information from the customer section - all pertinent customer information found in the customer module should be the same in the estimate module.
- **Add A New Estimate**
 - title should say "Add Estimate", not "Add Estimation"
 - Select Printing Type dropdown menu
 - there should be a module added similar to Materials and Sizes where we can add / edit / delete printing types as needed. This drop down menu should be populated from that module.
 - Length and Height fields should be in the same row next to each other and not so wide - each field should be 5 characters wide only.
 - Quantity - should be a text field that allows alphanumeric values; 10M, 15M, etc.
- the edit estimate page is missing the "Select Printing Type" title at the top of the page.

Add New Estimate page should include the following fields / information:

Date	
Description	Estimate #
Size	Colors
Substrate	Adhesive
Topcoat	Finishing
Unwind #	Quantity
Plates	Artwork

Date (new field)

- and auto fill with the date when the estimate is generated - should be in the following format: 07/17/2025
- Description

Estimate Number (new field)

- Should be a field called "Estimate Number" - this ticket number should auto populate with an 8 digit number that auto fills and is incremental from the last estimate number used -> 00000001, 00000002, 00000003 etc.

Size

- Should be a text field called "Size"
- Should pull data as a drop down from the sizes module

Colors

- Should be a text field called "Colors"
- should have three checkmarks below it:
 - Process
 - Spot
 - Other (should be a text field)

Substrate

- Should be a text field called "Substrate"
- Should have a text field below

Adhesive

- Should be a text field called "Adhesive"
- Should have a text field below

Topcoat

- Should be a text field called "Topcoat"
- Should have a text field below

Finishing

- Should be a text field called “Finishing”
- Should have a text field below

Unwind #

- Should be a text field called “Unwind #”
- Should have a text field below

Quantity

- Should be a text field called “Quantity”
- Should have a text field below

Plates

- Should be a text field called “Plates”
Should have a text field below

Artwork

- Should be a text field called “Artwork”
- Should have a text field below

**** Materials Section ****

- The Inventory Summary background color should not be blue - all Summary background
-

**** Sizes Section ****

- The Inventory Summary background color should not be blue - all Summary background
- the value needs to be floating point - when I tried to add a standard size like “8.5” it rounds up to 9. We need to have the fields able to accept a quote character as well -> 8.5” x 11”

**** Quantities Section ****

- This module section is not necessary - please delete and make the Quantity drop down menu in the Estimates module a text field.

General

- All the buttons should be repositioned as shown in the screenshots.
- The estimates section should have drop lists repopulated with content we designate
- we need the ability to add predefined options to each drop down list in the add new estimate section.
- the buttons should be located as they are in the screenshots.
- there has been no mention, or build example of where trashed items are being deleted to - we had asked, several times that trashing any items needs to be non-destructive and any

trashed item needs to have a trash page associated with it so if we want to restore an items that was mistakenly trashed we can do so - this is no where to be found! -> ANY ITEM THAT IS DELETED NEEDS TO HAVE THE ABILITY TO BE RESTORED.
